Riya Khasnis

San Francisco Bay Area | riya_khasnis@berkeley.edu | (408) 360-7294 | LinkedIn | Portfolio

EDUCATION

University of California, Berkeley Aug 2024 – May 2028
B.A. Data Science & Statistics (Double Major) *Berkeley, CA*
Relevant Coursework: Data Structures & Algorithms, Introduction to Artificial Intelligence, Data Engineering, Probability & Discrete Math, Linear Algebra, Statistical Theory

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL, R
Frameworks & Libraries: Next.js, React, React Native, Node.js, Expo Router, Recharts, PyTorch, YOLOv8, Pandas, NumPy
Data & Tools: PostgreSQL, REST APIs, Git/GitLab, Figma, Power Automate, SharePoint, Azure AI Vision
Concepts: Data Engineering, Data Pipelines, API Ingestion, Data Modeling, Data Validation, Data Cleaning, Schema Design, Full-Stack Development, Machine Learning, Computer Vision, Geospatial Analysis, Multi-Agent Systems, Dashboards

EXPERIENCE

WattTime Sep 2026 – Present
Project Manager & Technical Lead *Berkeley, CA*
- Leading 5 engineers building a data center validation tool that cross-references OpenStreetMap and Open Supply Hub records, flags discrepancies, and organizes supporting evidence for each asset.
- Directing validation of thousands of data center locations across facility type, operational status, coordinates, square footage, and power capacity to surface misclassified and outdated records.
- Translating manual research patterns into automated location matching and discrepancy checks, enabling review across much larger datasets.
- Coordinating with WattTime to define requirements and prioritize features, delivering an MVP for reviewing assets, documenting verified findings, and proposing corrections.

IncubXperts TechnoConsulting May 2026 – Aug 2026
AI Engineering Intern *Remote*
- Built LiMaS, a full-stack analytics platform (Next.js, TypeScript, PostgreSQL) tracking AI coding-tool usage/spend for 40+ developers
- Built authenticated REST ingestion for Cursor and GitHub Copilot APIs, normalizing 42K+ events into a single PostgreSQL schema with scheduled sync.
- Exposed typed API routes feeding Recharts dashboards for adoption, spend concentration, and license utilization, and identified $10,000 in unused licenses.

Humanitarian OpenStreetMap Team (HOT) Feb 2026 – Jun 2026
Machine Learning Engineer *Berkeley, CA*
- Supported humanitarian infrastructure mapping across 6,000+ geotagged images by building an end-to-end YOLOv8 object detection model for electrical towers and poles in noisy street imagery, with reproducible training and evaluation for field-mapping workflows.
- Prepared 6,000+ geotagged images for reproducible training by cleaning data, refining annotations, splitting datasets, and validating bounding boxes.
- Improved detection robustness through data augmentation, hyperparameter tuning, and iterative retraining in Python.

San Jose Museum of Art Aug 2025 – Dec 2025
Data & Automation Engineer *Berkeley, CA*
- Built an automated photo-organization workflow: new uploads trigger Azure AI Vision to classify 2000+ images (artwork vs. visitor photography), tag each file, and file it into the matching SharePoint folder via Power Automate.
- Built a unified reporting dashboard combining Meta Business Suite, Google Analytics, and YouTube data, replacing manual data consolidation across platforms.

Open Project Berkeley Jan 2025 – Dec 2025
Data Analyst / Frontend Developer *Berkeley, CA*
- Cleaned and geospatially processed 10K+ Berkeley Police incident records (Python, Pandas) into structured, route-level risk inputs for a student walking-safety map app.
- Built a TypeScript service on NewsAPI that pulled local crime news, classified articles by crime type, and exported structured CSVs to supplement incident-based safety scores.

PROJECTS & AWARDS

CalHacks AI Hackathon: 3rd Place, Fetch.ai Track – *AeroFreight AI* Jun 2026
- Built a six-agent freight-planning system on Fetch.ai's uAgents framework and Agentverse, with specialized agents for routing, tariffs, cost estimation, documentation, and escrow.
- Designed a central orchestrator agent that coordinates the specialists via agent-to-agent messaging to produce air and sea freight plans with landed-cost estimates.
