

Riya Khasnis

San Francisco Bay Area | riya_khasnis@berkeley.edu | (408) 360-7294 | [LinkedIn](#) | [Portfolio](#)

EDUCATION

University of California, Berkeley

Aug 2024 - May 2028

Majors: Data Science & Statistics

Relevant Coursework: Data Structures & Algorithms, Introduction to Artificial Intelligence, Data Engineering, Probability & Discrete Math, Linear Algebra, Statistical Theory

SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL, R

Frameworks/Libraries: Next.js, React, React Native, Node.js, Expo Router, Recharts, PyTorch, YOLOv8, Pandas, NumPy

Data & Tools: PostgreSQL, REST APIs, Git/GitLab, Figma, Power Automate, SharePoint, Azure AI Vision

EXPERIENCE

IncubXperts TechnoConsulting

Remote

AI Engineering Intern

May 2026 - Present

- Centralized AI coding-tool usage and spend across 40+ developers by building LiMaS, a Next.js/TypeScript analytics platform with PostgreSQL and Recharts to surface model adoption, active-user trends, spend concentration, and license utilization across teams.
- Unified 42K+ Cursor and GitHub Copilot events by building authenticated, paginated API ingestion and resilient data normalization, enabling cross-tool analysis by modeling users, models, tools, events, and licenses in a unified PostgreSQL schema.
- Surfaced adoption and cost drivers by shipping typed API routes and dashboards for usage, trends, spend, and license utilization.

Humanitarian OpenStreetMap Team (HOT)

Berkeley, CA

Machine Learning Engineer

Feb 2026 - Jun 2026

- Supported humanitarian infrastructure mapping across 6,000+ geotagged images by building an end-to-end YOLOv8 detector for electrical towers and poles in noisy street imagery, with reproducible training and evaluation for field-mapping workflows.
- Prepared 6,000+ geotagged images for reproducible training by cleaning data, refining annotations, splitting datasets, and validating boxes.
- Improved detection robustness by applying augmentation, hyperparameter tuning, and iterative retraining in Python.

San Jose Museum of Art

Berkeley, CA

Machine Learning Intern

Aug 2025 - Dec 2025

- Automated photo classification and organization by integrating Azure AI Vision with Power Automate and SharePoint.
- Centralized recurring performance reporting by combining Meta Business Suite, Google Analytics, and YouTube data in one dashboard.
- Reduced manual data consolidation by connecting automated collection and reporting workflows across multiple services.

Open Project

Berkeley, CA

Data Analyst / Frontend Developer

Jan 2025 - Dec 2025

- Produced route-level safety features by cleaning and transforming Berkeley Police incident data with Python, Pandas, and geospatial preprocessing, converting raw incidents into structured risk inputs used in dynamic route scoring for a safety-navigation platform.
- Strengthened dynamic safety scoring with 10K+ real-time reports by joining NewsAPI feeds with incident records.
- Contributed to a separate full-stack grocery and meal-planning mobile app for college students by designing workflows in Figma and implementing the frontend with React Native and Expo Router.

Acnovate Corporation

Santa Clara, CA

Data Science Intern

May 2024 - Aug 2024

- Built CNN-based product-image workflows by combining preprocessing, feature extraction, augmentation, object detection, and segmentation.

PROJECTS & AWARDS

CalHacks AI Hackathon: 3rd Place, Fetch.ai Track

Jun 2026

- Placed 3rd in the Fetch.ai track by building AeroFreight AI, a six-agent platform coordinating routes, tariffs, costs, documents, and escrow.
- Generated air and sea freight plans with landed-cost estimates by routing shipment value, volume, and speed/cost preferences through a central orchestrator coordinating specialized agents.
