San Francisco Bay Area | riya_khasnis@berkeley.edu | (408) 360-7294 | [linkedin.com/in/riya-khasnis-in](https://www.linkedin.com/in/riya-khasnis-in)

EDUCATION

University of California, Berkeley

May 2028

Major(s): Data Science & Statistics

Relevant Coursework: Data Structures & Algorithms, Data Engineering, Probability & Discrete Math, Linear Algebra, Statistical Theory

EXPERIENCE

IncubXperts TechnoConsulting

Remote

AI Engineering Intern

May 2026 - Present

- Built LiMaS, a full-stack license-management platform with Next.js, TypeScript, PostgreSQL, and Recharts, providing usage and spend visibility across 40+ developers.
- Integrated the Cursor Admin and GitHub Copilot APIs with authenticated, paginated ingestion of 42,000+ usage events and resilient normalization of inconsistent vendor responses.
- Designed a unified PostgreSQL schema across users, models, tools, usage events, and license states, with typed Next.js API routes powering recurring analytics views.
- Implemented responsive dashboards for model usage, low usage, trends, active users, spend concentration, and license utilization.

Humanitarian OpenStreetMap Team (HOT)

Berkeley, CA

Machine Learning Engineer

Feb 2026 - Jun 2026

- Built an end-to-end YOLOv8 computer vision pipeline for electrical tower and pole detection from noisy street-level imagery used in humanitarian infrastructure mapping.
- Created reproducible processing and training workflows for 6,000+ geotagged images, including ingestion, cleaning, annotation refinement, dataset splitting, and bounding-box validation.
- Improved the detection workflow through data augmentation, hyperparameter tuning, and iterative retraining in Python.

San Jose Museum of Art

Berkeley, CA

Machine Learning Intern

Aug 2025 - Dec 2025

- Developed AI-powered digital asset workflows with Power Automate, SharePoint, and Azure AI Vision to automate object detection, metadata tagging, and photo-library organization.
- Built an integrated analytics dashboard combining Meta Business Suite, Google Analytics, and YouTube data to support recurring performance reporting.
- Connected automated collection and reporting workflows across multiple services, reducing repetitive manual data consolidation for museum staff.

Open Project

Berkeley, CA

Data Analyst / Frontend Developer

Jan 2025 - Dec 2025

- Engineered a Python and Pandas geospatial preprocessing pipeline that cleaned and transformed Berkeley Police incident data into route-level risk features.
- Developed a custom NewsAPI wrapper to ingest and parse 10K+ real-time crime reports, integrating live incident data with historical records for dynamic safety scoring.
- Built responsive React Native and Expo Router features for a separate grocery and meal-planning application, translating Figma prototypes into user-facing workflows and managing deployment through GitLab.

Acnovate Corporation

Santa Clara, CA

Data Science Intern

May 2024 - Aug 2024

- Developed CNN-based computer vision workflows using preprocessing, feature extraction, data augmentation, object detection, and segmentation analysis.

PROJECTS & AWARDS

CalHacks AI Hackathon: 3rd Place, Fetch.ai Track

Jun 2026

- Built AeroFreight AI, a hub-and-spoke platform using Fetch.ai uAgents and Agentverse to coordinate six agents for routing, tariffs, costs, documentation, and escrow-based payments, generating international freight plans from shipment details.

SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL, R

Frameworks/Libraries: Next.js, React, React Native, Node.js, Expo Router, Recharts, PyTorch, YOLOv8, Pandas, NumPy

Data & Tools: PostgreSQL, REST APIs, Git/GitLab, Figma, Power Automate, SharePoint, Azure AI Vision
